### Visual Data on the Internet

http://www.boingboing.net/2009/07/30/bbvideo-send-me-a-l.html

With slides from James Hays, Antonio Torralba, and Frederic Heger 15-463: Computational Photography Alexei Efros, CMU, Spring 2010

# Big issues

- What is out there on the Internet? How do we get it? What can we do with it?
- How do we compute distances between images?

### Subject-specific Data

#### Photos of Coliseum

Portraits of Bill Clinton

## Much of Captured World is "generic"

### Generic Data

Food plates

pedestrians

#### faces

street scenes

### The Internet as a Data Source

- Social Networking Sites (e.g. Facebook, MySpace)
- Image Search Engines (e.g. Google, Bing)
- Photo Sharing Sites (e.g Flickr, Picasa, Panoramio, photo.net, dpchallenge.com)
- Computer Vision Databases (e.g. CalTech 256, PASCAL VOC, LabelMe, Tiny Images, imagenet.org, ESP game, Squigl, Matchin)

# How Big is Flickr?

- As of June 19<sup>th</sup>, 2009
- Total content:
  - 3.6 billion photographs
  - 100+ million geotagged images
- *Public* content:
  - 1.3 billion photographs
  - 74 million geotagged images

### How Annotated is Flickr? (tag search)

- Party 7,355,998
- Paris 4,139,927
- Chair 232,885
- Violin 55,015
- Trashcan 9,818

### **Trashcan Results**

From PoPPaP

### Is Generic Data useful?

A motivating example...

[Hays and Efros. Scene Completion Using Millions of Photographs. SIGGRAPH 2007 and CACM October 2008.]

#### **Diffusion Result**

### Efros and Leung result

### Scene Matching for Image Completion

### Scene Completion Result

## The Algorithm

### Scene Matching

### **Scene Descriptor**

### **Scene Descriptor**

Scene Gist Descriptor (Oliva and Torralba 2001)

### **Scene Descriptor**

Scene Gist Descriptor (Oliva and Torralba 2001)

# 2 Million Flickr Images

... 200 total

### **Context Matching**

Graph cut + Poisson blending

## **Result Ranking**

We assign each of the 200 results a score which is the sum of:

The scene matching distance

The context matching distance (color + texture)

The graph cut cost

### Why does it work?

Nearest neighbors from a collection of 20 thousand images

Nearest neighbors from a collection of 2 million images

## "Unreasonable Effectiveness of Data"

- [Halevy, Norvig, Pereira 2009]
- Parts of our world can be explained by elegant mathematics
  - physics, chemistry, astronomy, etc.
- But much cannot
  - psychology, economics, genetics, etc.
- Enter <u>The Data!</u>
  - Great advances in several fields:
    - e.g. speech recognition, machine translation
    - Case study: Google

- A.I. for the postmodern world:
  - all questions have already been answered...many times, in many ways
  - Google is dumb, the "intelligence" is in the data

# How about visual data?

- text is simple:
  - clean, segmented, compact, 1D
- Visual data is much harder:
  - Noisy, unsegmented, high entropy, 2D/3D

### Quick Overview

Comparing Images Uses of Visual Data

The Dangers of Data

## **Distance Metrics**

= Grayvalue distance of 50 values

## SSD says these are not similar

## **Tiny Images**

 80 million tiny images: a large dataset for nonparametric object and scene recognition Antonio Torralba, Rob Fergus and William T. Freeman. PAMI 2008.

## Automatic Colorization Result

#### Grayscale input High resolution

#### Colorization of input using average

## Automatic Orientation

- Many images have ambiguous orientation
- Look at top 25% by confidence:

• Examples of high and low confidence images:

## **Automatic Orientation Examples**

A. Torralba, R. Fergus, W.T.Freeman. 2008

## **Tiny Images Discussion**

- Why SSD?
- Can we build a better image descriptor?

Images from Dave Kauchak

## global histogram

- Represent distribution of features
  - Color, texture, depth, ...

#### Joint histogram

- Requires lots of data
- Loss of resolution to avoid empty bins

#### Marginal histogram

- Requires independent features
- More data/bin than joint histogram

#### Adaptive binning

- Better data/bin distribution, fewer empty bins
- Can adapt available resolution to relative feature importance

#### **Clusters / Signatures**

- "super-adaptive" binning
- Does not require discretization along any fixed axis

### Issue: How to Compare Histograms?

Bin-by-bin comparison Sensitive to bin size. Could use wider bins ... ... but at a loss of resolution

#### Cross-bin comparison

How much cross-bin influence is necessary/sufficient?

### Red Car Retrievals (Color histograms)

 $\chi^{2}(h_{i},h_{j}) = \frac{1}{2} \sum_{m=1}^{K} \frac{[h_{i}(m) - h_{j}(m)]^{2}}{h_{i}(m) + h_{j}(m)}$ 

Histogram matching distance

### Capturing the "essence" of texture

#### ...for real images

We don t want an actual texture realization, we want a texture invariant

What are the tools for capturing <u>statistical</u> properties of some signal?
## Multi-scale filter decomposition

### Filter response histograms

# Heeger & Bergen '95

Start with a noise image as output Main loop:

- Match pixel histogram of output image to input
- Decompose input and output images using multi-scale filter bank (Steerable Pyramid)
- Match subband histograms of input and output pyramids
- Reconstruct input and output images (collapse the pyramids)

# Image Descriptors

- Blur + SSD
- Color / Texture histograms
- Gradients + Histogram (GIST, SIFT, HOG, etc)
- "Bag of Visual Words"

### Gist scene descriptor (Oliva and Torralba 2001)

### Gist scene descriptor (Oliva and Torralba 2001)

### Gist scene descriptor (Oliva and Torralba 2001)

### Scene matching with camera transformations

## Image representation

**Original** image

#### GIST [Oliva and Torralba'01]

#### **Color layout**

### Scene matching with camera view transformations: Translation

#### 1. Move camera

2. View from the virtual camera

- 4. Locally align images
- 5. Find a seam
- 6. Blend in the gradient domain

3. Find a match to fill the missing pixels

### Scene matching with camera view transformations: Camera rotation

#### 1. Rotate camera

4. Stitched rotation

5. Display on a cylinder

2. View from the virtual camera

3. Find a match to fill-in the missing pixels

### Scene matching with camera view transformations: Forward motion

#### 1. Move camera

# 2. View from the virtual camera

3. Find a match to replace pixels

### Tour from a single image

#### Navigate the virtual space using intuitive motion controls

# Video

# **Comparing Images**

- (Blurred) SSD
- Color / Texture Histograms
- Spatial Histograms (GIST, etc)
- Bag of "Visual Words"

# Analogy to documents

Of all the sensory impressions proceeding to the brain, the visual experiences are the dominant ones. Our perception of the world around us is based essentially on the messages that r our eves. For a long tig etinal sensory, brain, image way sual centers i visual, perception, а movie s etinal, cerebral cortex, image discove eye, cell, optical know th nerve, image perceptid more com Hubel, Wiesel following the to the various ortex. Hubel and Wiesel demonstrate that the message about image falling on the retina undergoe wise analysis in a system of nerve cells stored in columns. In this system each d has its specific function and is responsible a specific detail in the pattern of the retinal image.

China is forecasting a trade surplus of \$90bn (£51bn) to \$100bn this year, a threefold increase on 2004's \$32bn. The Commerce Ministry said the surplus would be created by a predicted 30% \$750bn. compared v China, trade, \$660bn. T annoy th surplus, commerce China's exports, imports, US, deliber agrees yuan, bank, domestic, yuan is foreign, increase, governo trade, value also need demand so country. China yuan against the dom. nd permitted it to trade within a narrow but the US wants the yuan to be allowed freely. However, Beijing has made it ch it will take its time and tread carefully be allowing the yuan to rise further in value.

### The Dangers of Data

# Bias

- Internet is a tremendous repository of visual data (Flickr, YouTube, Picassa, etc)
- But it's <u>not</u> random samples of visual world
- Many sources of bias:
  - Sampling bias
  - Photographer bias
  - Social bias

## **Flickr Paris**

### **Real Paris**

## **Real Notre Dame**

# **Sampling Bias**

People like to take pictures on vacation

# **Photographer Bias**

 People want their pictures to be recognizable and/or interesting

VS.

# **Photographer Bias**

People follow photographic conventions

VS.

#### **Social Bias**

#### "100 Special Moments" by Jason Salavon

#### Gallagher et al, CVPR 2009

# **Reducing / Changing Bias**

Street side Google StreetView

Satellite google.com

Webcams

- Autonomous capture methods can reduce / change bias
  - But it won't go away completely
- Sometimes you can just pick your data to suit your problem, but not always...
